

DALRYMPLE BAY STACKER RECLAIMER

DEC 2022
G&S ENGINEERING
\$0.3 M

Dalrymple Bay Coal Terminal is located at Hay Point on the Central Coast of Queensland. It is the main handling facility for coal produced in the Bowen Basin. Responding to an urgent client request, DEMEX was engaged by G&S Engineering, a subcontractor to BMA, to remove a large decommissioned coal stacker reclaimer forming part of the Dalrymple Bay Coal Terminal's infrastructure, which is used by multiple coal producing companies operating in the region.

The works were conducted in a live operating environment characterised by ship loading activities, overhead crane operations, and vehicle traffic.

Completed in just 13 days with zero incidents, the crew processed the steel using one 48 tonne excavator fitted with a shear attachment, and for the thicker gauges of steel, oxy/LPG was used. In total over 450 tonnes of scrap steel was salvaged and transported to Raw Metal Corp in Mackay. The client specified a requirement for the site to be left in pristine condition in order for it to be ready to receive new export material.

DEMEX received sign off from the client at effective completion.
