

LUGGAGE POINT WASTE WATER TREATMENT PLANT

NOV 2019 - JAN 2020
FULTON HOGAN
\$0.22 M

DEMEX was engaged by Fulton Hogan to demolish part of the sewerage treatment plant at Luggage Point, located at Pinkenba in Queensland.

The works involved detailed saw cutting and major structural demolition works around the delicate infrastructure. The project also demanded extremely low vibration limits to ensure the infrastructure left behind was not disturbed.

The Luggage Point Advanced Water Treatment Plant (LPAWTP) is part of the Western Corridor Recycled Water Project (WCRWP), one of the world's largest recycled water schemes and the largest project of its kind in the southern hemisphere.

Close monitoring of noise, vibration and dust throughout the demolition process was key to meeting stakeholder expectations on the project.
